

## **IN THE SPECIFICATION:**

Please replace paragraph [0053] of the specification with the following replacement paragraph.

“In addition to main memory 920, computer system 900 may include additional memory mediums (not shown) on which computer programs according to various embodiments may be stored. The term “memory medium” may include an installation medium, e.g., a CD-ROM, or floppy disks, additional system memory such as DRAM, SRAM, extended data output (EDO) DRAM, SDRAM, DDR SDRAM, Rambus RAM, etc., or a non-volatile memory such as a read-only memory (ROM), or magnetic media such as a hard drive, or optical storage. The memory medium may include other types of memory as well, or combinations thereof. The memory medium preferably stores a compiled version of a software program or programs for event-triggered transaction processing as described herein. The software program(s) may be implemented in any of various ways, including procedure-based techniques, component-based techniques, and/or object-oriented techniques, among others. For example, the software program may be implemented using ActiveX controls, C++ objects, JavaBeans, Microsoft Foundation Classes (MFC), or other technologies or methodologies, as desired. A processor, such as processor 910, executing code and data from the memory medium includes a means for creating and executing the software program or programs according to the methods and/or block diagrams described above.”
